akea

HOTEL MANAGEMENT SERVICES

PROJECT PLAN · OCTOBER 2026

Akea Hotel Operations Platform

One white-label system for US hotel owners and management companies: dashboards, workforce and payroll hours, finance and bank reconciliation, compliance, investors, loan packages and construction.

LIVE PORTAL	akea-portal.onrender.com (moving to portal.akeahms.com)
TECHNOLOGY	Supabase (US East) · React web on Render · Expo iOS and Android · TypeScript
STATUS	Phase 1 live · Phases 2-4 database built · screens in progress

1 · OVERVIEW

What we are building

Akea is building its own hotel operations platform and will sell it, under each customer's own brand, to hotel owners and management companies across the United States. It brings the work of several tools into one place: daily hotel reporting and payments (today Otelier IntelliSight, TruePlan, Rec, DigiAudit and DigiPay), scheduling, time clock and payroll hours (today Homebase), and the accounting, compliance, investor and lending work that usually lives in spreadsheets and email.

Goals

- **One login, every hotel.** Owners see the whole portfolio; managers see only their hotels; staff see only what their job needs.
- **Real numbers, fast.** Night-audit reports, bank statements and invoices in any format are read automatically within seconds.
- **Money moves safely.** Bills and purchases follow approval limits by role; deposits reconcile to the bank automatically.
- **Nothing expires unnoticed.** Permits, insurance and documents raise alerts at 90, 60, 30 and 7 days.
- **Sell it.** Each customer company gets its own name, logo, colours and web address (white-label).

Portfolio in the system today

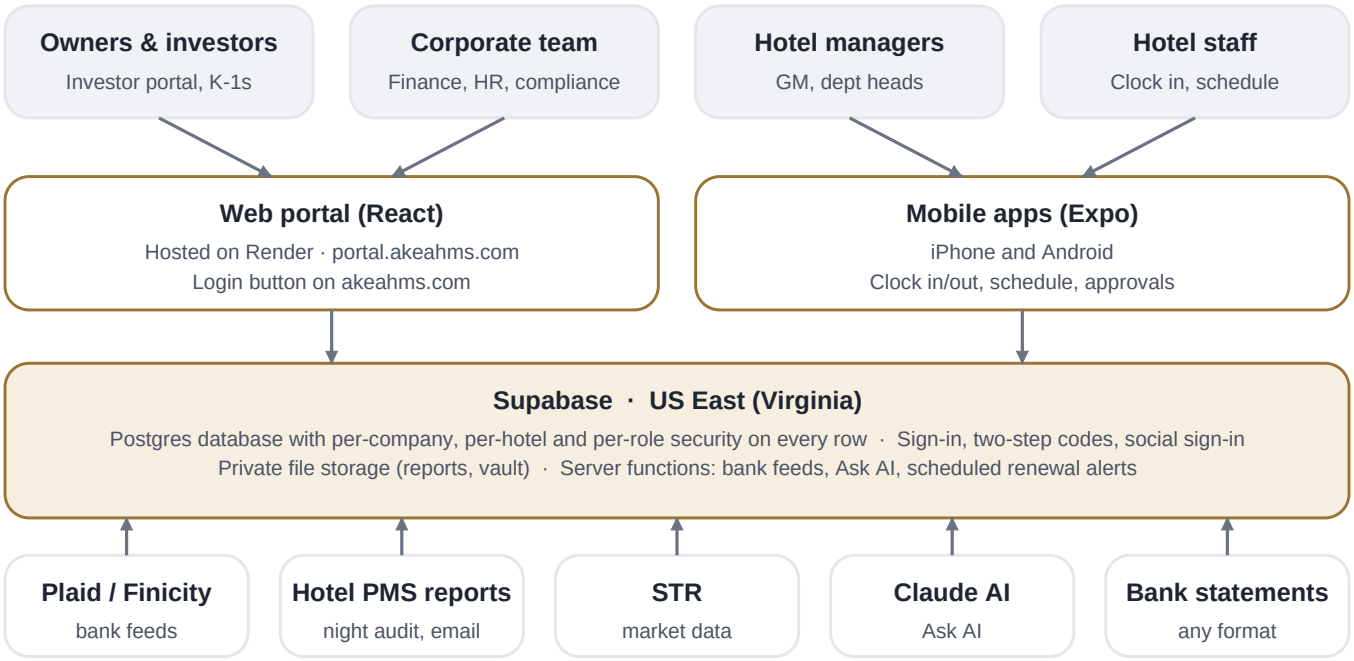
Hotel	Location	Rooms	Status
Hampton Inn & Suites	Cleburne, TX	80	Operating
Atwell Suites	Fort Worth, TX	95	Operating
Hilton Garden Inn	Fort Worth, TX	127	Operating
Fairfield Inn & Suites	Fort Worth, TX	104	Operating
La Quinta Inn & Suites	Bedford, TX	110	Operating
Candlewood Suites	Alliance, TX	98	Development · opens Jun 2027
Homewood Suites	Sarasota, FL	112	Development · opens Sep 2027
Atwell Suites DFW Airport South	Irving, TX	101	Development · opens Nov 2027

Sample data, clearly labelled as sample, fills the dashboards until real reports start flowing in.

2 · HOW IT FITS TOGETHER

Architecture

There is no separate application server to maintain. Supabase provides the database, sign-in, file storage and a few small server functions; the web portal and mobile apps talk to it directly. Security is enforced inside the database on every row, so even a mistake in a screen cannot show someone data their role and hotels do not allow.



Who can see what

Access = **role** (what someone can do) + **hotels** (where). Each module has five levels: none, view, edit, approve, admin. Roles marked * must use two-step sign-in.

Role	Main access	Approval limit
Principal / CEO *	Everything; admin of users and settings	Unlimited
Regional Director *	Operations admin; approves finance, workforce, purchasing	$25,000
Corporate Controller *	Finance and compliance admin	Unlimited
AP Clerk *	Enters bills and vendors	None
HR Director *	Workforce admin; pay rates	—
Asset Manager *	View-only across modules	—
General Manager	Their hotels: operations admin; approves bills, POs, timesheets	$5,000
Department Head	Schedules and purchase requests for their area	$1,000
Line Staff	Own schedule and time clock; purchase requests	None
Investor / Owner *	Investor portal for their hotels only	—
Auditor / Lender *	Read-only dashboards, finance, compliance	—

3 · DELIVERY

Phases and status

Phase 1 Foundation

Done · live

- Company accounts with white-label branding; 11 hotel-industry roles; invitations by email.
- Sign-in: email and password (8+ characters), emailed sign-in link, Google / Microsoft / Apple / LinkedIn buttons, two-step codes from an authenticator app.
- Dashboards: Portfolio Overview, Hotel Overview (14 measures vs last year or budget), STR Market (index vs competitive set).
- Report Inbox with missing-report alerts; Hotels; Company Information with state-specific registrations; Users & Permissions; White-label Settings.

Phase 2 Workforce — replaces Homebase

Database done · screens next

- Employees by department with private pay rates (visible to approvers only).
- Colour-coded schedule by department; open shifts; publish to staff.
- Clock in / out from phone, web or a shared tablet with a personal PIN; links to the scheduled shift.
- Daily hours, weekly overtime over 40, timesheet approval, payroll export file.

Phase 3 Finance & accounting

Database done · screens next

- Vendor list with W-9 and 1099 tracking; bill pay with approval limits by role; payment scheduling.
- Purchase orders: request, approve, order, receive; receiving creates the bill automatically.
- USALI-style chart of accounts, journal entries, P&L; vs budget and last year, monthly budgets.
- Bank statements in CSV, OFX, QFX, BAI2, Excel or PDF read in seconds; automatic deposit matching (card batches, Amex net of fees, bill payments).
- Plaid and Finicity bank feeds for banks that support them.

Phase 4 Compliance & capital

Database written · applying

- Document vault with folders (legal, tax, insurance, permits, HR, floor plans, loan, investor); hotel floor plan uploads.
- Permits and insurance policies with renewal alerts at 90 / 60 / 30 / 7 days and on expiry.
- Investor portal: dashboard, ownership, distributions, tax documents and K-1s (each investor sees only their own).
- One-click bank loan package, downloaded as a ZIP; personal financial statement (PFS), visible only to its owner.
- Separate construction tool: budget vs committed vs spent, lender draws, milestones and change orders.

Phase 5 Intelligence & documents

Up next

- Automatic reading of night-audit and other reports so real numbers replace sample data.
- Ask AI: plain-English questions answered from your own data, within each person's access.
- PDF form filler (e.g. bank and SBA forms) and print-ready views of every page.

Phase 6 Mobile apps

Planned

- iPhone and Android apps (Expo): clock in / out, my schedule, shift swaps, approvals and alerts.

Phase 7 Launch

Planned

- Testing and security review; portal.akeahms.com with the akeahms.com Login button pointing to it.
- Supabase Pro plan before real data; website refresh on Wix (paused).

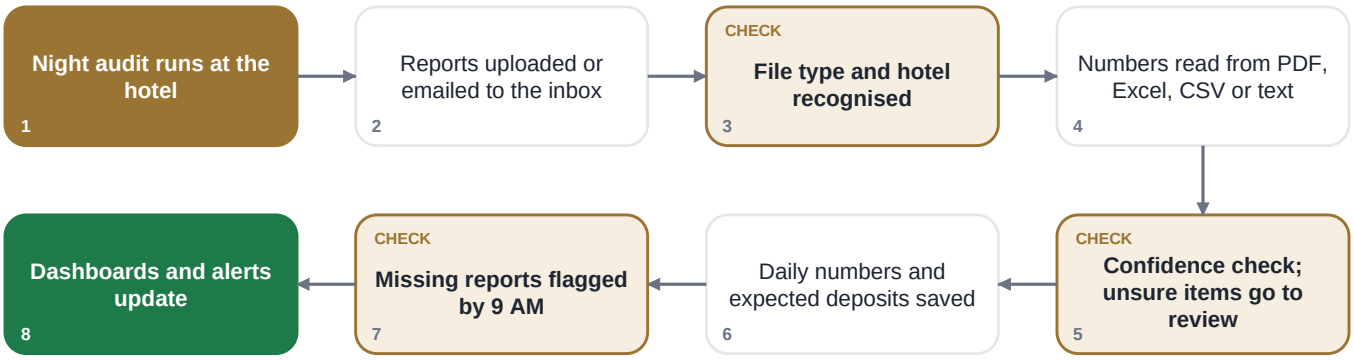
4 · KEY WORKFLOWS

Flow charts

How the main processes run, start to finish. Gold boxes are where the system checks something before moving on.

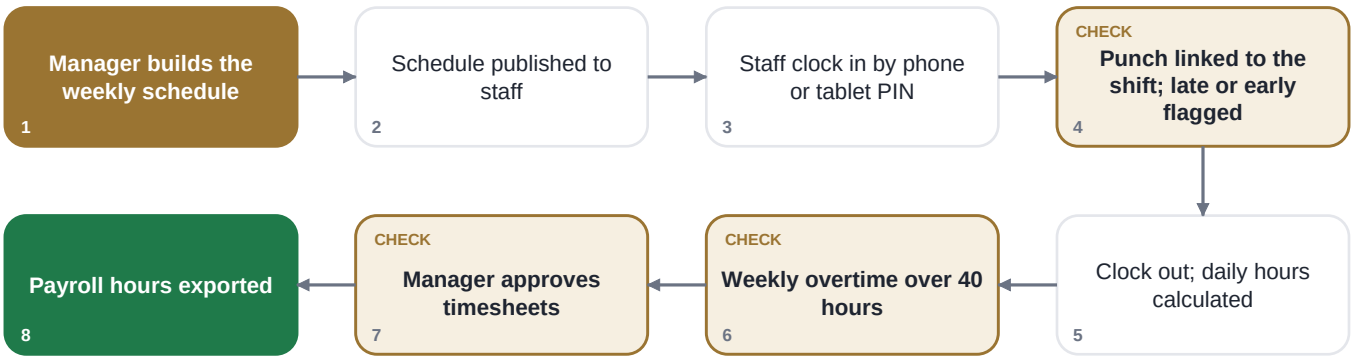
Daily reporting: night audit to dashboard

Reports arrive by upload or email and become the next morning's numbers.



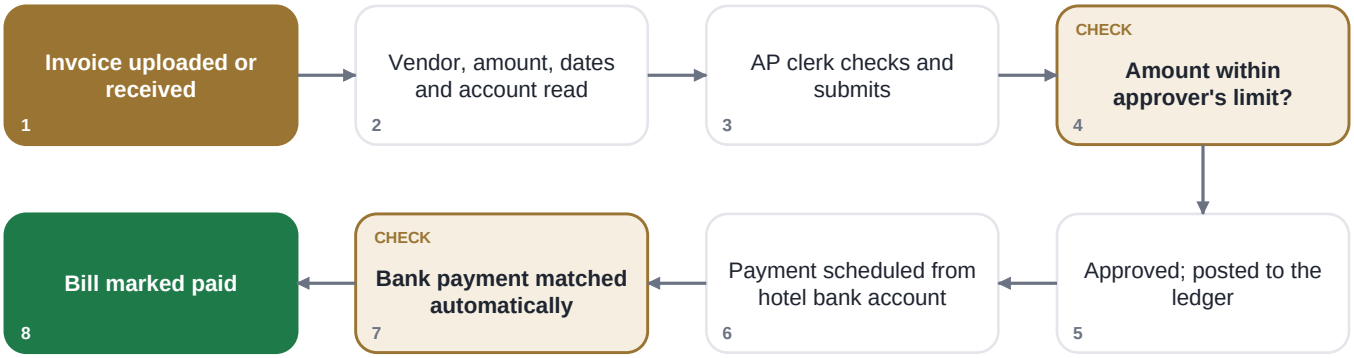
Schedule to payroll

Replaces Homebase: the schedule drives the time clock, and approved hours feed payroll.



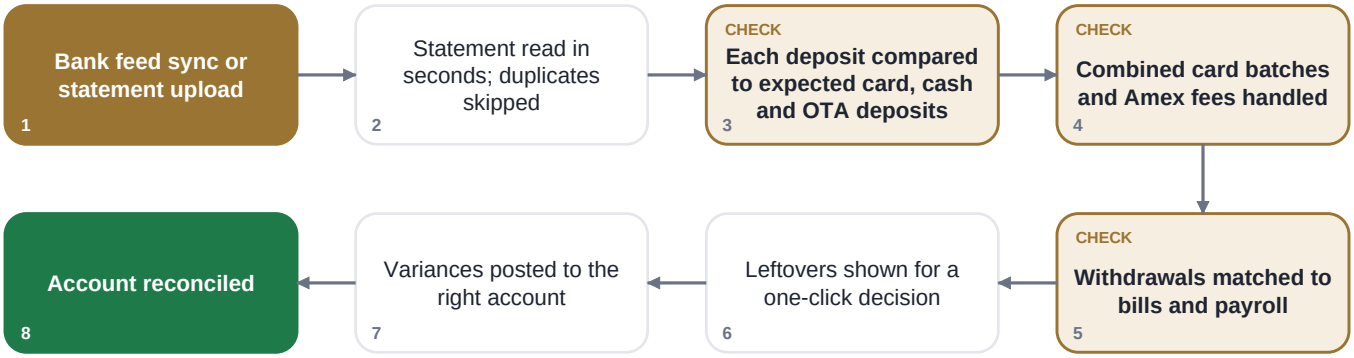
Bill pay with approval limits

Invoices are read automatically; each approver can only approve up to their limit.



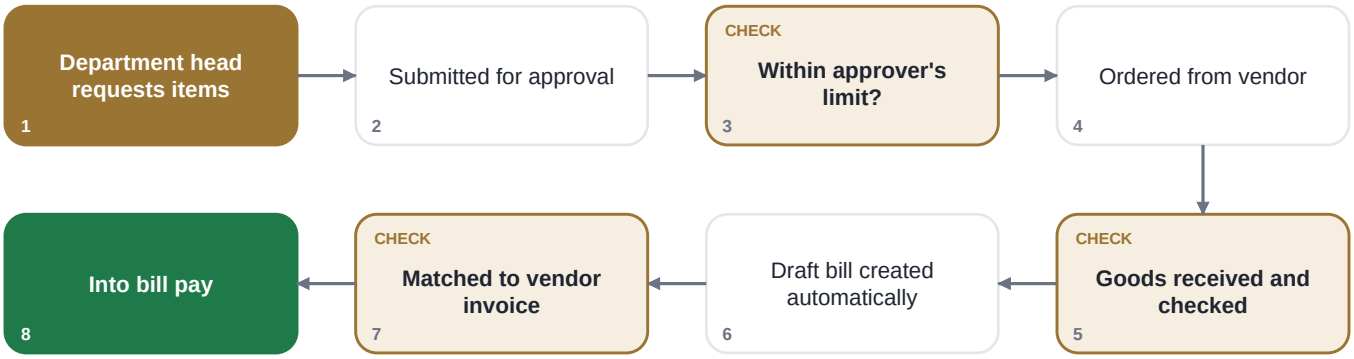
Bank reconciliation

Works with live bank feeds or with any statement file for banks without feeds.



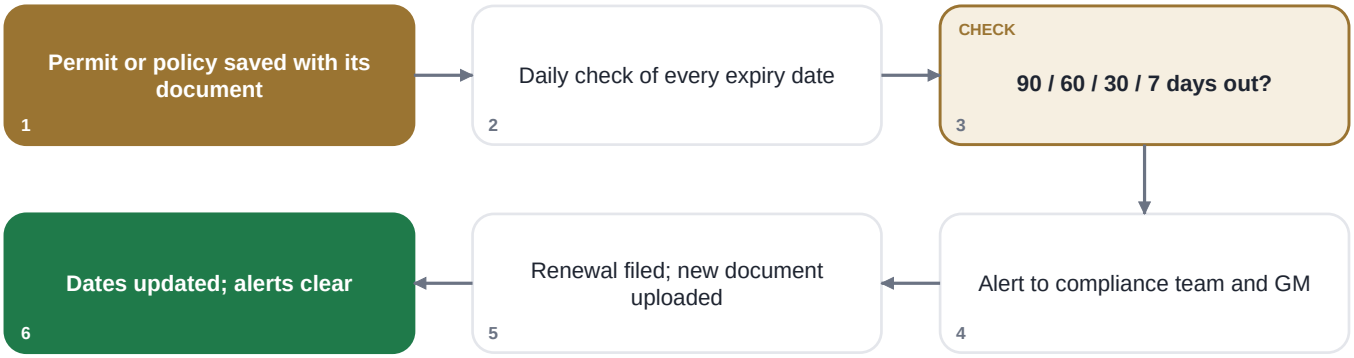
Purchase order

From a department request to a bill ready for payment.



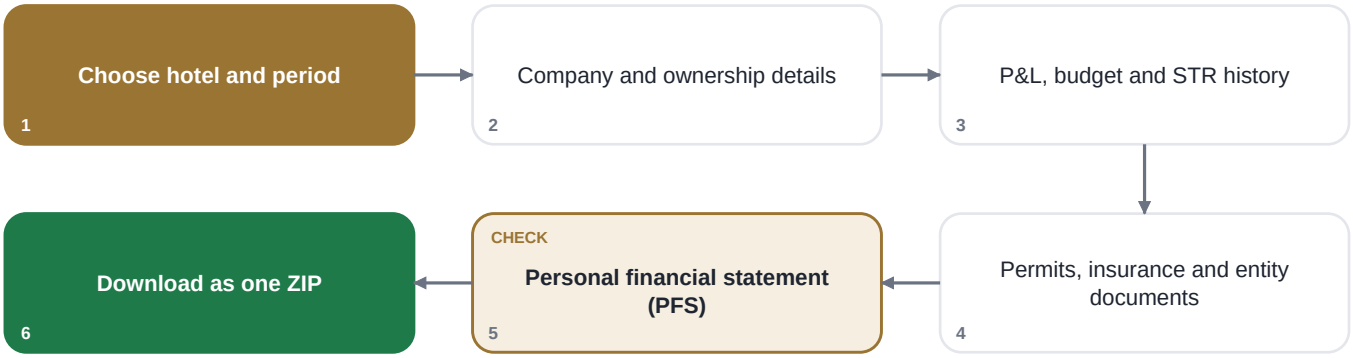
Permits and insurance renewals

Nothing lapses: every expiry date is watched every day.



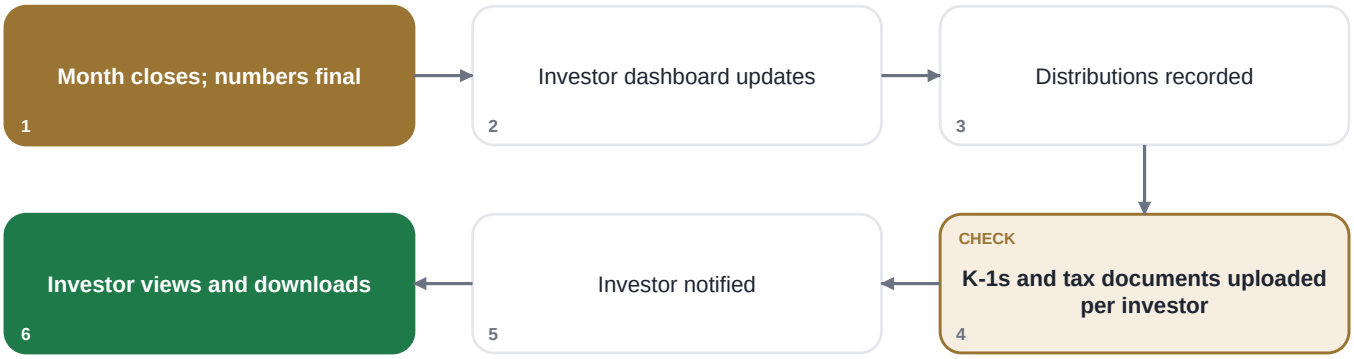
One-click bank loan package

Everything a lender asks for, gathered into one ZIP download.



Investor reporting

Investors see only their own hotels, distributions and tax documents.



5 · WHAT HAPPENS NEXT

Action items

Owner: Akea

#	Action	Why
1	Supabase → Authentication → URL Configuration: Site URL https://akea-portal.onrender.com; add redirect URLs for the portal domains	Confirmation and sign-in emails open the portal (not localhost)
2	Turn on Microsoft and Google sign-in in Supabase (guided, ~10 min each)	One-click sign-in for the team
3	Give Render's GitHub app access to the akea-platform repository	Updates go live automatically
4	Add DNS record for portal.akeahms.com in Microsoft 365; point the website Login button to it	Branded portal address
5	Plaid and/or Finicity account and keys	Live bank feeds
6	Anthropic API key (Supabase secret)	Ask AI
7	Apple Developer account ($99/year) and Google Play account ($25 once)	Publish the mobile apps
8	Upgrade Supabase to Pro before real data	Backups, no pausing, more capacity

Owner: Claude (build)

- Finish the Phase 4 database and build the screens for Phases 2-4 (workforce, finance, compliance, investors, construction).
- Phase 5: report reading, Ask AI, PDF filler and print views.
- Phase 6: mobile apps; Phase 7: testing, security review and launch.

Running costs (estimate)

Service	Today	At launch
Supabase (database, sign-in, files)	Free	$25 / month (Pro)
Render (web portal hosting)	Free	Free – $7 / month
Expo / app stores	—	$99 / year Apple + $25 once Google
Plaid or Finicity bank feeds	—	Per connected account (quote from provider)
Ask AI (Anthropic API)	—	Pay per use; typically a few dollars per user per month

Prices are estimates from each provider's public plans and may change; confirm before purchase. STR data use is subject to STR's licence terms.
